

Contribution to Ensuring Prosperous Lifestyles through Disaster Recovery Support

Daiseki processes 1.11 million tons of industrial waste per year from the approximately 5,900 plants with which it does business. When natural disasters such as earthquakes and floods occur, Daiseiki's nationwide network of 7 works and 234 collection and transportation vehicles allow us to quickly respond with

collection and transportation vehicles to our affected customers and provide support for restoration. The development of the manufacturing and service industries is indispensable for the establishment of abundant lifestyles. Daiseiki supports Japan's manufacturing industry as a behind-the-scenes force.

Daiseiki's major disaster recovery support

Great East Japan Earthquake (2011)

The Great East Japan Earthquake caused many of Daiseiki's customers with production bases in eastern Japan to be affected by the earthquake and tsunami, causing heavy oil and other materials to spill into the soil, ocean, and rivers. Because heavy oil is insoluble in water, it spreads to the surrounding area once spilled, resulting in increased pollution. Daiseiki's Kanto Works and Chiba Works set up an emergency system to go to the aid of customers. The collection and transportation vehicles of the Kanto Works were certified by Tochigi Prefecture as emergency vehicles, which enabled priority access to expressways and made it possible to quickly rush to the affected customers.

We received a letter of appreciation from the customer for our assistance in treating wastewater and restoring the damaged plant. We feel that this experience has further deepened our relationship of trust with our customers.

Torrential rainfall in Saga Prefecture (2019)

Daiseiki received a request for assistance after a torrential rainstorm in Takeo City, Saga Prefecture, caused a river to overflow, resulting in an oil spill from a nearby plant. Daiseiki, mainly through its Kyushu Works, collected and processed the spilled waste oil. Afterwards, we received a letter of appreciation from Takeo City.

Noto Peninsula Earthquake (2024)

When the Noto Peninsula Earthquake occurred on January 1, Daiseiki checked the safety of its employees and the condition of its equipment, and on January 3, sent aid from its Hokuriku Works and Nagoya Works to customers affected in Ishikawa and Toyama prefectures. We heard words of joy from customers, such as "the restoration, which was expected to take six months, was completed early" and "thanks to the restoration of lifelines like the cafeteria and bath, we were able to open them for use by employees and their families."

Recovery support for the Noto Peninsula Earthquake
